

Industrial Ventilation Systems for Mining Operations

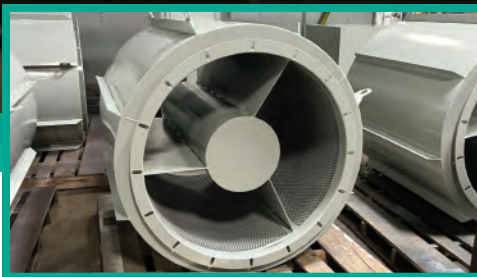

We determine your design needs with the following system analysis:

- Fluid flow system analysis
- Heat load evaluation
- Computational fluid dynamics (CFD) analysis
- Finite Element Analysis (FEA)
- System drawings
- Equipment specifications

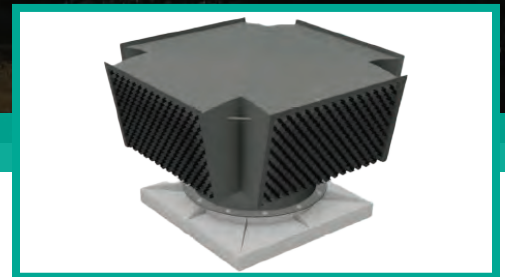

Heavy Duty Supply and Exhaust Fans

Our Heavy Duty Axial Fan products not only offers higher air flow but increased durability. These are custom designed and fabricated fans built to perform in severe environments.

Ventilation Silencers for Noise Control

We simultaneously consider mining ventilation noise control, so you never have to worry about dealing with loud, distracting ventilation systems or worker hearing loss from high decibel environments.

Weather-proof Hood Ventilation Systems

Our Weather-proof hood surpasses any other ventilation hood on the market. It's lighter, has a smaller footprint, keeps out more rain and is suitable for 100mph wind loads.
